# ANNUAL CODED WIRE TAG PROGRAM MISSING PRODUCTION GROUPS

Annual Report 1993

DOE/BP-01931-1

This report was funded by the Bonneville Power Administration (BPA), U.S. Department of Energy, as part of BPA's program to protect, mitigate, and enhance fish and wildlife affected by the development and operation of hydroelectric facilities on the Columbia River and its tributaries. The views of this report are the author's and do not necessarily represent the views of BPA.

This document should be cited as follows:

## INTRODUCTION

In 1989, the U.S. Fish and Wildlife Service (USFWS) recieved funding from the Bonneville Power Administration (BPA) to begin a program of coded-wire tagging missing production groups of anadromous fish. The purpose of the program is to mark a representative group of fish from each production release.

The three objectives of the program are:

1. To estimate the survival of each release group,
2. To estimate the contribution of each release group to ocean and inriver fisheries, and
3. To estimate the straying rate of hatchery fish.

This information will be used to evaluate hatchery practices and individual broodstocks. It will also enable salmon harvest managers to develop a scenario to harvest excess hatchery fish while protecting the threatened or endangered stocks.

In order to meet these objectives, a minimum of one marked group of fish for each production release is necessary for evaluation. The level of marking varies according to the hatchery's location, species of fish, and age at release. In general, 50,000 fish are marked with a coded wire tag (CWT) to represent each production release group at hatcheries in the Bonneville pool area and downriver and 120,000 to 200,000 fish are marked for groups at hatcheries in the Mid-Columbia Area and Idaho.

All fish released from the various facilities. along with mark/unmarked release ratios are reported to the Pacific States Marine Fisheries Commission (PSMFC). All fish recovered in the various fisheries or at the hatchery are sampled to recover coded-wire tags. This information is then reported to the PSMFC along with sampling rates. Contribution, to various fisheries and survival of the release groups can then be estimated from this information.

## RESULTS

Under the 1993 contract with BPA, the USFWS, Lower Columbia River Fishery Resource Office marked a total of 1,094,512 salmon and steelhead. This total represents 40 different tag groups (Table 1).

HATCHERY	SPECIES	BROODYEAR	DATE	GROUPS	NUMBER
Willard NFH	Coho Salmon	91	January 1993	2	50,384
Entiat NFH	Spring- Chinook "O-Age Release"	92	March 1993	4	200,046
Entiat NFH	Spring Chinook	92	April 1993	2	120,000
Little White Salmon NFH	Spring Chinook "O-Age Release"	92	April. 1993	2	100,400
Little White Salmon NFH	Spring Chinook	92	April 1993	1	50,137
Winthrop NFH	Spring Chinook-	92	May 1993	4	200,956
Little White Salmon NFH	Upriver Bright Fall Chinook	92	June 1993	1	50,008
Carson NFH	Spring Chinook	92	June 1993	12	161,476
Eagle Creek NFH	Coho Salmon	92	October 1993	4	50,382
Eagle Creek NFH	Winter Steelhead	93	October 1993	6	60,310
Eagle Creek NFH	Coho Salmon	92	October 1993	2	50,413

## DISCUSSION

The percent recovery (by state) for the last five completed broodyears is presented in Appendix A for each federal hatchery. The broods included are as follows: chinook 1983 to 1987; coho 1985 to 1989; and steelhead 1984 to 1988. This information is completely absent or incomplete for many USFWS hatcheries due to lack of marked groups of fish. Appendix B contains reference documents for these same broodyears. These documents were developed using the Columbia River Information System (CRIS) database and Tag Summary 1 reports (TSI) downloaded from the Pacific State Marine Fisheries Commission (PSMFC).

### Abernathy Salmon Culture Technology Center

Abernathy Salmon Culture Technology Center (SCTC) is located 14 miles west of Longview, Washington, on Abernathy Creek, approximately three miles upstream from its confluence with the Columbia River. The center was constructed in 1959. At present, lower river tule fall chinook are the only species reared on a production basis at Abernathy.

There were no releases of marked fish for broodyears 1983 to 1987 from Abernathy. Marking fish with coded wire tags was resumed for BY 1989 under the missing production group program. It has continued each year under other programs.

### Eagle Creek National Fish Hatchery

-Eagle- Creek National Fish Hatchery (NFH) is located about seven miles from Estacada, Oregon on Eagle Creek, approximately eight miles above its confluence with the Clackamas River. The hatchery was constructed in 1956 under the Columbia River Fishery Development Program (CRFDP). Even though Eagle Creek NFH has raised fall and spring chinook in past years, production is now limited to coho and winter steelhead.

The 1989 brood coho survived at a rate of 0.91 percent. This compares with 4.1 percent survival of broodyear 88 coho. The coho were caught primarily off the Oregon coast in the sport and commercial fisheries (Figure 1).

### Carson National Fish Hatchery

Carson NFH is located 13 miles northwest of Carson, Washington at the confluence of the Wind River and Tyee Springs. Carson NFH began operation in 1938 by rearing and releasing fall chinook salmon and trout. In 1956, the hatchery was remodeled under the Mitchell Act in an attempt to establish a spring chinook run in the Wind River. Current production involves adult collection, egg incubation and rearing of spring chinook salmon.

Figure 1. Contribution and survival for Eagle Creek National Fish Hatchery, coho broodyear 89.

Broodyears 1983 to 1985 spring chinook from Carson **were** marked with a coded wire tag for a density study. The average survival of these broods' is 0.22 percent. These fish were recovered mainly in the freshwater sport fishery.

#### Little White Salmon National Fish Hatchery

Little White Salmon NFH is located on the Little White Salmon River, twelve (12) miles east of Stevenson, Washington. The hatchery was originally built in 1898 and was remodeled and expanded in 1958. Now operating as part **of** the CRFDP, hatchery production consists of rearing upriver bright fall chinook and spring chinook salmon.

Both O-age and yearling spring chinook are released from the hatchery. Broodyears 1983 and 1984 were coded wire tagged. Average survival for O-age release fish was 0.11 as compared with a average survival of 0.39 percent for the yearling release. Marking of spring chinook was resumed for broodyear 1988 under the Missing Group Program.

Broodyears 1983 through 1985 upriver brights were marked for both a yearling release and fingerling release. Average percent survival for the fingerling release was 1.1 as compared to the survival of 0.36 for the yearling release. The extended rearing period for upriver brights is no longer in effect.

#### Willard National Fish Hatchery

Willard NFH is situated four miles upstream of Little White Salmon NFH on the Little White Salmon River. Willard NFH was constructed in 1952 under authorization of- the Mitchell Act and was originally planned as a fall chinook hatchery. The hatchery was switched to a spring chinook and coho facility because of cold water temperatures. Since the mid-1960s, -the hatchery has been used entirely for coho- production, All adult coho are trapped and spawned at Little White Salmon NFH.

Broodyear 89 coho survived at a rate of 0.32 percent. They contributed mainly in ocean sport fisheries of Oregon and Washington (Figure 2).

#### Spring Creek National Fish Hatchery

Spring Creek NFH is located on the Columbia River at Underwood, Washington; about 30 miles upstream of Bonneville Dam. The hatchery was constructed in 1900 and began operations a year later. Spring Creek NFH was remodeled in 1955 under the Mitchell Act and currently produces tule fall chinook.

Broodyear 87 fall chinook were recovered primarily in commercial fisheries off the coasts of Canada and Washington as well as in the Columbia River gill net fishery (Figure 3). The survival of the 1987 broodyear was 0.3 percent compared with the latest five year average of 0.2 percent.

### **Warm Springs National Fish Hatchery**

Warm Springs NFH is located on the Warm Springs River, approximately 14 miles north of Warm Springs, Oregon. The hatchery was authorized in 1966 and began operations in 1978. The Confederated Tribes of the Warm Springs Indian Reservation of Oregon entered into an agreement with the USFWS to increase tribal fishing opportunities. Operations at the hatchery presently consist of adult collection, egg incubation and rearing of spring chinook salmon.

The 1987 brood of spring chinook is the first group of fish coded wire tagged since the late 70's. Since then, every fish released from the hatchery is marked. The 87 brood spring chinook had a 0.14 percent survival and contributed mainly to the freshwater sport fishery on the Deschutes River (Figure 4).

For specific information concerning ongoing studies at Warm Springs NFH refer to "Warm Springs National Fish Hatchery Evaluation and Anadromous Fish Study on the Warm Springs Indian Reservation of Oregon" progress reports.

### **Leavenworth National Fish Hatchery**

Leavenworth NFH is located about 40 miles northeast of Leavenworth, Washington along Icicle Creek, a tributary to the Wenatchee River. The hatchery was originally authorized in 1937 by the Grand Coulee Fish Maintenance Project and was re-authorized in 1938 by the Mitchell Act. The facility began operations in 1942 and is currently used for the production of summer steelhead and spring chinook salmon.

None of the summer steelhead at Leavenworth are marked with a coded wire tag. The 87 brood of spring chinook salmon released as yearlings had a total survival of 0.26 percent and were recovered mainly in the freshwater sport fishery by WDF and treaty ceremonial fishery (Figure 5). The 87 brood spring chinook released as fingerlings survived at a rate of only 0.003 percent.

### **Entiat National Fish Hatchery**

Entiat NFH is located on the Entiat River, east of Entiat, Washington. Construction began in 1940 under authorization of the Mitchell Act and operations began a year later. Present production at the hatchery consists of adult collection, egg incubation, and rearing of spring chinook salmon.

No groups of fish released at Entiat were marked for evaluation. Beginning with brood 1988, the spring chinook at Entiat are coded wire tagged under the missing group program.

### **Winthrop National Fish Hatchery**

Winthrop NFH is situated along the Methow River, near the town of Winthrop, Washington. The facility began operations in 1942 by trapping adult sockeye, chinook, and steelhead at Rock Island Dam and transporting them to the

hatchery. By 1951, the hatchery was rearing sockeye, chinook, steelhead, kokanee, coho and resident trout. Winthrop NFH produces only spring chinook salmon at the present time.

Beginning with brood 1989, the spring chinook at Winthrop were marked with coded wire tags under the missing group program.

#### Dworshak National Fish Hatchery

Dworshak NFH is located at the confluence of the North Fork Clearwater River and the main stem Clearwater River about three miles west of Orofino, Idaho. Dworshak NFH first began operations in 1969 rearing summer steelhead and resident trout. The facility was expanded in 1982 under the Lower Snake River Compensation Program (LSRCP) to rear spring chinook salmon. The hatchery is now used to produce spring chinook and summer steelhead.

No marked groups of spring chinook were released at the hatchery for broods 1983 to 1987. Brood 1986 summer steelhead released at the hatchery were marked with coded wire tags for evaluation. The steelhead has an overall survival of 1.9 percent and contributed mainly to the freshwater sport fishery in Idaho (Figure 6). Many of these steelhead were also recovered in the Columbia River gillnet fishery.

#### Kooskia National Fish Hatchery

Kooskia NFH is situated along Clear Creek, just upstream of the confluence, with the Middle Fork Clear-water River. It is located approximately 75 miles southeast of Lewiston, Idaho. The hatchery was authorized in 1961 and is currently used for adult collection and rearing of spring chinook salmon.

No marked groups of fish were released at Kooskia until brood 1988 were marked with coded wire tags under the missing group program. Fish marking at Kooskia NFH has continued each year under other programs.

For further information regarding the various programs at Dworshak and Kooskia NFHs, refer to "A Review of Coded-Wire Tagged Fish Released from Dworshak, Kooskia, and Hagerman National Fish Hatcheries".
